

Intel a leader in Green Power

Intel Corporation has distinguished itself as Oregon's largest retail renewable power user and one of the largest in the West. In recognition, the electronics company received PGE's first Green Power Leadership Award in November. Intel buys about 14 million kilowatt-hours of PGE Clean WindSM power annually, enough to meet the needs of almost 1,300 average homes in the utility's service territory.

Ron Johnson, PGE's vice president for customer resource strategy and generation engineering, presented the award. "Fourteen-million kilowatt hours of green power sends a powerful message to the company's customers, and the communities where it does business," Johnson said. "Intel is one of the renewable power standard bearers among PGE's business customers and a wide variety of businesses see the same advantages. They range from the smallest to the very largest in the state." U.S. Senator Ron Wyden was also on hand to congratulate Michael Dever, Site Utility Manager at Intel, on their renewable power purchase.

Almost 500 PGE business customers have shown their commitment to the environment and sustainable resources by purchasing renewable power.

PGE recognizes Intel as a leader in environmental stewardship and their support of renewable power.

Your organization has the power to make a difference. Clean Wind is 100% new wind power from wind farms in the Northwest, and is an easy, affordable way to support renewable energy. Portland General Electric helps publicize your commitment to the environment with a variety of publicity, award and recognition benefits. Help build a brighter tomorrow by signing up for lean Wind today. Contact your PGE account manager, send an e-mail message to renewables@pgn.com or visit PortlandGeneral.biz/CleanWind for more information.
